Fariz Hasabi Adiwijaya

Front-end Developer

Legok, Kab. Tangerang hasabifariz hasabifariz@gmail.com +62 895338128698

Career Objective

Front-end developer with nearly 5 years of experience building internal web applications for logistics, finance, and retail. Currently working in Angular and TypeScript on a warehouse management system, after several years in React. I focus on the parts users never see but always feel: reusable component structure, consistent API patterns, and interfaces that stay fast once the data grows into the thousands of rows.

Skills

Portfolio	hasabifariz.github.io/myPortfolio
Frameworks	Angular, ReactJS
UI Libraries	PrimeNG, PrimeReact, MaterialUI, TailwindCSS, PrimeFlex
Languages	TypeScript, JavaScript, HTML, CSS
State & Reactivity	RxJS, Angular Signals, React Hooks
Backend (working knowledge)	Node.js, Express.js, Neo4J
Tooling	Git, GitKraken, Bitbucket, Docker
Monitoring & QA	Elastic APM (RUM), SonarQube
Project Management	Jira, ClickUp
Spoken Languages	Indonesian (native), English (limited working proficiency)

Experience

PT Flexo Solusi Indonesia (Flexofast)

Contract, on-site

Front-end Developer

December 2025 - Present

B2B logistics and fulfillment company. Building the Warehouse Management System used by warehouse and operations teams.

- Merged two legacy systems, a warehouse management app and an order management app, into one Angular codebase. Two disconnected tools became one product.
- Built the shared UI library used across the whole app: data tables, dropdowns, file upload and download, barcode scanning. New features now reuse these instead of rebuilding them.
- Replaced inconsistent page-by-page API calls with one unified service pattern, so every module talks to the backend the same way.
- Implemented authentication, role-based access control, and permission handling across the platform, including session guards with idle detection and multi-tab logout sync.
- Developed the core WMS modules: receiving, inventory, picking, order processing, and reporting.
- Built a mobile interface for warehouse floor operations sharing the same backend as the desktop app.
- Added background export and download with polling and toast notifications, so operators can keep working while large reports generate.
- Set up dual-language support (Indonesian and English) with ngx-translate, and fixed the production caching that was serving stale translation files.
- Integrated Elastic APM RUM with a custom HTTP interceptor to capture frontend errors in production.

PT ADI Consulting Indonesia

Contract, full on-site

Front-end Developer

September 2024 - March 2025

– Placement at **Arya Noble** (beauty, skincare, wellness, and personal care).

- Built internal web applications with ReactJS, PrimeReact, and Tailwind.
- Turned Figma designs into responsive interfaces that held up across devices.
- Worked through Jira tickets for bug fixes and new features on a regular release cycle.
- Coordinated with backend developers and business analysts to sharpen requirements and adjust API contracts before they became a problem.
- Kept the codebase clean through code reviews, Bitbucket pipelines, and SonarQube quality gates.

PT Indocyber Global Teknologi

Contract, full on-site

Front-end Developer

June 2023 - February 2024

– Placement at **AXA AFI** (insurance and financial services).

- Built UI components against business requirements for claims processing and user management.
- Integrated APIs with the backend team to keep data flowing correctly between systems.
- Wrote responsive HTML email templates that rendered consistently across mail clients.

PT Soluix Finteknologi Indonesia

Full time, hybrid

Front-end Developer

November 2021 - May 2023

Worked across four client products.

AJAIB - Bank Bumi Arta

- Built user interfaces from Functional Specification Documents and integrated the supporting APIs.

Kawan Lama Group - Invoice Portal

- Designed and built a web-based invoice management system covering tenants, users, and transactions.
- Implemented Figma designs with consistent behavior across screen sizes.
- Integrated APIs for real-time invoice generation and data updates, using ReactJS and MaterialUI.

Clarity - E-commerce Platform & Admin Panel

- Built a furniture sales platform serving both public and LKPP procurement channels.
- Handled product catalogs, pricing, and transactions through API integration.
- Built the admin panel for content and inventory management in ReactJS and MaterialUI.

WMS Honda Line 1 & 2

- Extended a warehouse management system for inventory tracking and logistics.
- Added features for reporting, search, and tracking; fixed bugs through Jira.

PT Hexacore Bina Sejahtera — Full time, full on-site

Web Developer — November 2020 - March 2021

Projects for **Telkom Indonesia**.

ITAM - IT Asset Management

- Built a web-based asset management system for IT asset tracking and storage.
- Used PugHTML, Node.js, Express.js, SemanticUI, and Neo4J.
- Optimized database queries to cut down load times.

UIMax - ISP & OSP (Unified Inventory Management)

- Refactored existing applications to make them easier to maintain and faster to run.
- Wrote API queries for complex data retrieval feeding the reporting layer.

Certifications

TOEFL Certification — Online Certification

Golden English — March 2025

- **Score**: 570 out of 700

Database Administration Fundamentals — Offline Certification

Microsoft Technology Associate — May 2018

Office Excel 2010 — Offline Certification

Microsoft Office Specialist — June 2017

Education

Politeknik TEDC Bandung

Diploma IV, Information Technology — August 2016 - July 2020

- **GPA**: 3.62 out of 4.00
